COPYRIGHT STATEMENT

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials including foreign works under certain conditions. In addition, the United States extends protection to foreign works by means of various international conventions, bilateral agreements, and proclamations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

The Columbia University Libraries reserve the right to refuse to accept a copying order if, in its judgement, fulfillment of the order would involve violation of the copyright law.

COTTON PRODUCTION IN TENNESSEE, 1928-1937

- By Counties -

Acreage planted to cotton in Tennessee during the past 10 years has varied from 757,000 acres in 1935 to 1,152,000 acres in 1930. The small acreages from 1934 to 1936 resulted in large part from acreage reductions made by farmers cooperating with the Agricultural Adjustment Administration. Approximately 264,000 acres of cotton were plowed up under the terms of the first cotton program in 1933.

Yield per acre during the 10-year period has varied from 157 pounds in 1930 to 318 pounds in 1937. The extremely low yield in 1930 was caused by severe drought. The relatively low yield in 1935 was caused by an early October frost blasting a late crop. Yields since the A.A.A. programs began in 1933 have been relatively high due to the elimination of the less productive acres, better cultural practices, improved seeds, and favorable weather conditions. The yield in 1937 exceeded the previous records established in 1878 and 1931 by about 18 percent.

Production of cotton is expressed in 500-pound equivalent gross weight bales and has varied during the 10-year period from 317,000 bales in 1935 to 661,000 bales in 1937.

In general, acreage, yield, and production tended to vary in the counties in conformity with the State.

The estimates of production are based upon ginnings within each county as reported to the U. S. Bureau of the Census with adjustments for cross-county movement of seed cotton.

The estimates of acreage planted are based upon the censuses of 1925, 1930, and 1935, available data from the Agricultural Adjustment Administration for the years 1933 to 1937, inclusive, and current reports from crop reporters relating to cotton acreage in each year.

The estimates of yield per acre are based upon yields computed from acres and bales reported to the Census in Census years and upon current reports from crop reporters relating to yield in each year.

The estimates of acreage planted and of yield per acre naturally needed to be reconciled with the estimates of production in such manner as to give a consistent series of estimates of acreage and of yield per acre.

S. T. Marsh,
Associate Agricultural Statistician.
